

TRAM NGUYEN / Software Developer

📍 Chicago, IL, USA ✉️ designertvn@gmail.com ☎️ 510.862.4643 🔗 tram-nguyen.dev 📄 [Github](#)

PROFILE

I'm a software developer with 10 years of experience working in every part of the tech ecosystem. I've got the bright eyes and endless curiosity of a rookie, with the battle-hardened muscles and situational experience of a seasoned veteran. I've led cross-functional product teams, been the point person when it comes to putting out fires, and successfully navigated the ever-changing tech landscape.

SKILLS AND EDUCATION

Languages & Libraries: JavaScript (ES6), TypeScript, React, Node, jQuery, Ruby, Rails, Sinatra, Rspec, SQL, PostgreSQL, HTML5, CSS3

Tools: Git, Github, npm, Bitbucket, Jira, Confluence, Looker, Kontent.ai, Dialogflow, Figma, Adobe Creative Suite, Miro, Salesforce

Skills: Agile/Scrum, RESTful APIs, object-oriented programming, test-driven development (TDD), code reviews, technical documentation, A/B testing, user testing, roadmapping and strategy, project management, training development, mentoring, communicating cross-functionally

Education:

- **Launch School - Remote** - Full Stack Software Engineering
- **Columbia College - Chicago, IL** - Fine Arts

RELEVANT EXPERIENCE

PROFESSIONAL DEVELOPMENT SABBATICAL - SEPT 2022 - PRESENT

- **Completed a multi-year, mastery-based engineering program alongside self-guided learning** to gain fluency in front- and back-end languages, frameworks, databases, RESTful APIs, and object-oriented programming. Designed and built multiple software applications.

PRODUCT MANAGER - JELLYVISION LAB, AUG 2021 - AUG 2022

- **Led a cross-functional Agile product team of 12** software engineers, data scientists, UI/UX designers, writers, and animators.
- **Created detailed scopes for new features;** wrote clear technical specs, pseudologic, and proposed data structures.
- **Collaborated closely with Data and Engineering teams** to correct inaccuracies in usage data calculations, set up new views in the product dashboard, and develop a data dictionary for third-party data integrations from a banking partner.
- **Worked with internal developers and third-party integration development teams** to identify the root cause of outages and incidents, mitigate impact to users, and quickly resolve the incidents.

UX WRITER, CUSTOMIZATION TEAM LEAD - JELLYVISION LAB, DEC 2020 - OCT 2021

- **Split time 50/50 between creative and technical work, serving as a SME on internal tools and APIs for dev teams.** Diagnosed and troubleshot bugs; outlined severity, impact, and potential solutions. Scoped new product features, wrote technical specs and pseudocode, and identified dependencies.
- **Built tools to support the custom solutions team,** streamlining the approval process and reducing customer confusion. This included a searchable script database and a customized preview tool to create mock-ups of prospective interactive software.

FRONT-END DEVELOPER - JELLYVISION LAB, MAY 2016 - DEC 2020

- **Developed, tested, and maintained new features** using proprietary development tools and JavaScript. Troubleshot and resolved complex bug fixes. Identified technical requirements, dependencies, and feasibility for new product features. Participated in code reviews, wrote technical documentation, and ported legacy code.
- **Designed, scoped, built, and wrote technical specs for custom software solutions.**
- **Designed and built a training and onboarding app used by hundreds of employees.** Served as the Product Owner and Frontend Developer on the project, building, testing, and deploying new features. Led a small team of devs and content creators to create and update courses.

SELECT PROJECTS

Word Salad - A game that seamlessly combines three of the most popular word puzzles from *The New York Times*—the Crossword, Connections, and Wordle. Built with reusable React components, it features a responsive interface that easily transitions between puzzle modes within the same session, and real-time feedback and scoring. (v2: Typescript, React, Next.js, HTML, CSS; v1: JavaScript, HTML, CSS)

Nguyen Streak - A CMS for employees to store and manage their work "wins." Features secure user authentication with encrypted passwords, a database with robust CRUD operations, and an integrated search and filtering system. (v2: Ruby, Rails, SQLite3, HTML, CSS; v1: Ruby, Sinatra, PostgreSQL, HTML, CSS)

AXEL - Built a responsive front-end for a LMS used to train hundreds of employees across multiple departments. It allowed students to view course materials, take interactive quizzes, and track their learning progress. Admins were able to upload and manage course materials and access anonymized quiz data in real time. (JavaScript, HTML, CSS)
